## About This Game

ABE VR is an intense experience that recreates the horrifying story about a misguided robot seeking the unconditional love of humans...at whatever cost.

Created in Unreal Engine, and continuing our filmmaking in virtual reality, ABE VR is based on ABE the multi-award winning short film, and planned feature film, written and directed by Rob McLellan.

No longer do you have to just watch the film, you now get to experience it as a character. Specifically, ABE's chosen victim.

is it a great game!

one of best and most fun i've played.. A roguelike for PC that actually feels like your playing a real Mystery Dungeon game! While the graphics are cute the game itself is extremely challenging. If you liked Shiren the Wanderer or any of the Torneko games then this game is for you!. Simple game that once you get how it works, can entertain for a bit.. Have to give it a third go.

Two times I rushed through without even realizing it.... A thoroughly enjoyable dungeon crawler that's easy to learn and hard to master. Put it on hardcore mode and the game turns into a roguelike that plays like God intended them to be.. Jogo bacana com um desfecho para o The Chosen RPG, porém a história é curta demais, menos de 2 horas da pra zerar o jogo. Vale a pena pegar em promoção se ja jogou o primeiro jogo!. I jumped into my first outing with BattleSky VR and I had a blast. I can't believe how fast I can move with out getting sick. I played some two on two escort mode which was a lot of fun and then a little free for all where the other players were helping me out with the controls.. As a huge Treasure Planet fan, you can imagine my excitement when I found out Steam offered this game. And I must say, I was not let down. This game was a joy to play. The combat is simple and satisfying, and I had a lot of fun picking my crew. In the later chapters when you have more ships in your fleet, gameplay is a blast. And the galaxy environment around you is actually really pretty. Story wise, I'd say it's good. It gives you a nice look at what the characters are doing around five years after the movie. The voice acting was good too. Brian Murray voices Silver, same as the movie, and although Jim's voice actor is different I think he did a great job. Plus, the music is awesome.

Sometimes the flying segments are a little slow, but I do think that makes it more realistic. Speed depends on how big your ship is, with the biggest being the slowest. You do spend a bit of each chapter waiting for your ship to reach its destination. Overall, this game is really fun and definitely worth the time. It's not a long game, but I wish it were. If you're a fan of Treasure Planet, this is a must play.

Just a little side note for the controls: I found my mouse gave me some resistance while I was playing, which made clicking on the buttons difficult. But all I had to do was change my mouse's polling rate down to 125 and it was back to smooth.

---

I am a huge fan of walking simulators but this just wasn't the game for me. Good scenery and narration, but just kind of dry. Also glitched the map within 20 mins of playing by just doing normal navigation.. I cannot run the game from the steam client but it works from the folder.. Short but fun game made for kids.

Hand-drawn graphics, you like it or you don't.

Easy to get all the achievements. Impressively accurate damage model and weapon feel to PUBG when sniping. It consists of a single shooting range with targets at increasing distances, starting from 25 meters, into 50, 75, 100, 200, 300, 400.

However, judging by the feel of full-auto weapons and the apparent lack of the newly added attachments (half grip, 6x scope etc.), it hasn't been updated to reflect the changes of patch #12 back in April when AR's and SMG's were rebalanced to make spraying more difficult. The mouse sensitivity values also don't correspond to the PUBG equivalents, so you can not get an accurate sensitivity that carries on into the real game, ruling out any potential spray control training for now.

For bolt-action sniping, however, it does *feel accurate*. *The markings on 8x scope roughly corresponds to the bullet drop for the Kar98, but when put on the AWM it is no longer accurate. I could also not find any option to change the zeroing of the scopes manually.*

*All in all I cannot recommend this in its current state, simply because it's not up to date with the current PUBG patches. It is however very mechanically sound and a great for practicing with the Kar98 at different ranges! If it's updated it will be a great tool for practice, since PUBG absolutely refuses to add a practice range to their sorry excuse of a videogame.. Well made VR movie with a horror theme. It's free, so try it.*
